Summary

Software engineer who likes wearing multiple hats. I've worked across AI, backend, frontend, infrastructure, and production support, and enjoy taking ideas from a whiteboard to production while working closely with product and customers.

Experience

Rimon

Full-Stack Engineer

Remote - Switzerland
Dec 2025 - present

Rimon Technologies is a Swiss startup building AI-assisted documentation and knowledge tools for industrial companies.

- Built and shipped production AI features across the stack, from backend services and APIs to frontend applications and infrastructure.
- Owned features from design through deployment, including production support and customer issues.
- Built multilingual RAG pipelines, AI integrations, and evaluation tooling for enterprise knowledge assistants.
- Designed and built a custom video dubbing pipeline that reduced processing costs by ~80% while significantly improving processing speed.
- Worked directly with the CTO, designer, and product stakeholders to shape APIs and deliver customer-facing features.

MVP.ai

Full-Stack Engineer (Contract / Fractional)

Remote - New York
July 2025

- Built and shipped an end-to-end product backend, including APIs, authentication, and database design
- Collaborated closely with frontend to design APIs and ship user-facing features
- Integrated OpenAI APIs to power AI-driven product functionality
- Deployed and operated production services using Docker and Railway

Centara-Research AG

Software Developer Intern

Remote - Switzerland
September 2024 - March 2025

- Designed and implemented a blockchain data extraction system in Python, processing over 500 million Bitcoin transactions (~500GB) into a hybrid PostgreSQL + Redis database architecture
- The new design enabled processing hundreds of millions of records in just 3 days, a dramatic improvement over the estimated multi-week duration of the previous approach
- Owned the project end-to-end including architecture, implementation, testing, and deployment, achieving a final evaluation score of 18/20

Education

ISEC

BSc in Computer Science Engineering

September 2019 – 2025

Comprehensive program in software development and systems engineering. Covered C, C++, Java, Python, JavaScript, SQL, Bash, and MATLAB across multiple paradigms (OOP, procedural, functional, concurrent). Core topics included algorithms, OS (Linux/Windows), distributed systems, databases, networking, AI, web/mobile development, HCI, and software project management.

Skills

Languages & Frameworks

TypeScript, JavaScript (Node.js), Python, React, Java, C

Frontend

React, HTML/CSS, Typescript, API integration

Backend

REST APIs, authentication PostgreSQL, MySQL, Redis OpenAI API

AI

Langchain, Langfuse, RAG, LLM Evaluation

Infrastructure

Docker, Railway Git, basic CI/CD, Azure

Languages

Portuguese

Native

English

Level C1
